## *The Information & Content Management Experts*

---

InfoConnect was established in 1995 by Mr. Lim Tong Pheng, an entrepreneur with strong background in software development and consultancy. Our business goal is to cater for the growing needs for information and content management (ICM) solutions in the financial services industry.

Today with the proliferation of digital transformation, InfoConnect has speeded up our digital roadmap to provide our customers with an integrated solution on mobility, process automation, web technology, enterprise content management and business intelligence & analytics for the financial services industry.

At InfoConnect, we serve to create business value for our clients – fulfilling their information and content management and transformation needs. We continuously seek to provide them with a sustainable competitive edge in the market place through the ability to anticipate, react and execute ahead of competition. Information is the key success factor to all businesses, and InfoConnect has the confidence and capability to be your solution partner of choice to help you achieve your goals with great success.

### **Our Beliefs**

“If it is worth doing...it is worth doing well”

### **Our Mission**

“To provide integrated Information and Content Management Solutions for Digital Transformation that enable efficiency in companies to anticipate, react and execute ahead of competition”

### **Our Vision**

“To be recognized as a global leader and well respected as Information and Content Management solutions provider”

---

## *Digital Transformation with InfoConnect*

---

**Digital transformation** is the profound **essence** of business and organizational activities, processes, competencies and models to fully leverage the changes and opportunities of a mix of **digital** technologies and their accelerating impact across society in a strategic and prioritized way, with the present and future.

Digital Transformation is not simply about technology—it requires business leaders to re-envision existing business models and embrace a different way of bringing together people, data, and processes to create value for their customers through systems of intelligence. Digital Transformation is essential for organizational growth and sustainability.

InfoConnect with its solutions and experienced resources to help organizations to strategize, change and implement digital transformation.

Launch of Efficient Mobile Solution (EMO) 

**2017**

Incorporation of InfoConnect Company Limited (Thailand)   
Incorporation of PT InfoConnect Solusi Indonesia   
Launch of Robotics Automation Solution

---

## *Our Solutions*

---

### **Enterprise Content Management**

- Supports document scanning, classification & profiling, recognition, data extraction, indexing, archiving, searching, viewing, version control, document routing, collaboration, process automation and process monitoring
- Supports eform submission
- Supports structured and semi-structured documents
- Supports document life cycle management
- Supports free-form technology that allows documents with different layouts to be extracted without defining a separate template for each. Example: supplier invoices / bills, correspondences, etc. This means that the application is more quickly productive and more robust when changes are made to the documents to be processed.
- Support enterprise document repository
- Support report distribution to authorized subscribers

### **Content Services Platform**

- Provides content related services and APIs for integration to application web portal and enterprise business applications
- Allows implementer to apply his industry specific experience and knowledge to produce customer focused UIs for application processing e.g. banking loans origination / trade finance, insurance claims / new business underwriting, invoice processing, etc.
- Provides collaboration around content.

### **Mobile System development (Sales Quotation System / eSubmission)**

- Support Apple iPad and Android Tablet
- Enable agent to create quotation for presentation and email to prospect
- Support capturing biometric signature images
- Support capturing supporting documents such as NRIC / Payslip / Credit Card images
- eSubmission integrated to backend workflow submission system
- Provide sales activities management

### **Insurance Application System (New Business Underwriting / Policy Servicing / Claims)**

- Complete web-based solution for automating form-driven insurance business processes
- Built on the powerful and flexible Liquid Office BPM and Docuflow ECM platform
- Automated ICR, OCR, OMR, Barcode intelligent forms processing
- Initiate workflow process from the forms or backend core system
- Priority assignment for task processing
- Document completeness check with configurable document checklist, with bypass option
- General work pool and personal work item listing
- Automated task routing based on Authority Limit
- Image/Document searching and retrieval from DMS
- Supports Letters generation

- Reports and Audit Log
- Auto bulk images retrieval for batch policies printing

### **e-Policy and e-Statement**

- Performs the job of form design
- Taking data from LOB (Line-of-Business) applications and parses the data onto electronic forms to generate electronic documents
- Multiple delivery channels for network printing, electronic distribution (fax, email)
- Storing e-Statement and e-Policy into digital archives / storage
- Making these e-Statement and e-Policy accessible via Internet Portal

### **Enterprise Report Distribution System**

- Consolidates and stores all your enterprise application reports from the multiple back-end applications into a secure central report repository.
- Provides cost effective distribution and secure access to these report
- Access multiple applications reports via single user interface on corporate report portal
- Do away with separate log-in to different applications to view reports – result in lesser disruption to critical applications and reduce application licensing fees and storage cost
- Improved digital rights management
- Secured transfer with SSL support and encryption
- Improve compliance and auditability
- Keeps longer history of reports for compliance purpose

### **Business Intelligence**

- Business intelligence (BI) allows business users to analyze and better understand their organization's plans and results.
- Powerful digital dashboard provides management users visibility and clarity into the performance of the various business units, channels and products within the organization.
- BI provides insight into what's working correctly while identifying potential problem areas for corrective actions to be taken. It can be used to recognize market opportunities as well as problems and alert your organization to potential issues when exception conditions occur.
- All employees have the responsibility to make the best decisions possible, based upon the data available to them at the time. If their ability to analyze this data and transform it into useful information is improved, the overall quality of their decisions can be improved as well.
- Provides process intelligence, identify bottlenecks and areas for improvement for better user experience
- Able to perform customer profiling and provides ability to cross sell and up sell to existing customers

### **Report Mining**

- Monarch is a Windows-based self service analytics with simplified data entry tool that is easy to use — even if you're not a "power user" with advanced technology skills. Monarch easily mines data from existing text-based, PDF or XPS reports. It also lets you access and analyze data from database files, spreadsheets, ODBC sources, delimited text, and HTML files.

#### Features

- Imports Data Directly from virtually any corporate database, spreadsheets, database files, PDF files, HTML files and more
- Extracts Data from Report Files produced on any mainframe, midrange, client/server or PC system
- Exports to Excel 2016 Open XML (xlsx) spreadsheets as well as standard (xls) spreadsheets so you can work with your data in the format you want
- Supports SharePoint® and Docuflow repositories, including access and export
- Works with Data in Monarch to sort, filter, analyze, visualize and export data to a spreadsheet, database and other application
- Creates New Views of Data using data extracted from existing reports, combine report-based data and/or database data
- Easily combines from multiple data sources in one Monarch session

### **Robotic Process Automation (RPA)**

- Many organizations still rely on manual tasks for vital business processes, such as collecting, reviewing and inputting information between systems, websites and portals. These repetitive, remedial tasks require your employees to log in and out of multiple systems, copying and pasting data between different sources and formats. Manual tasks are highly inefficient and inaccurate.
- **RPA** is a viable technology for solving data integration and automation challenges that never seem to get solved

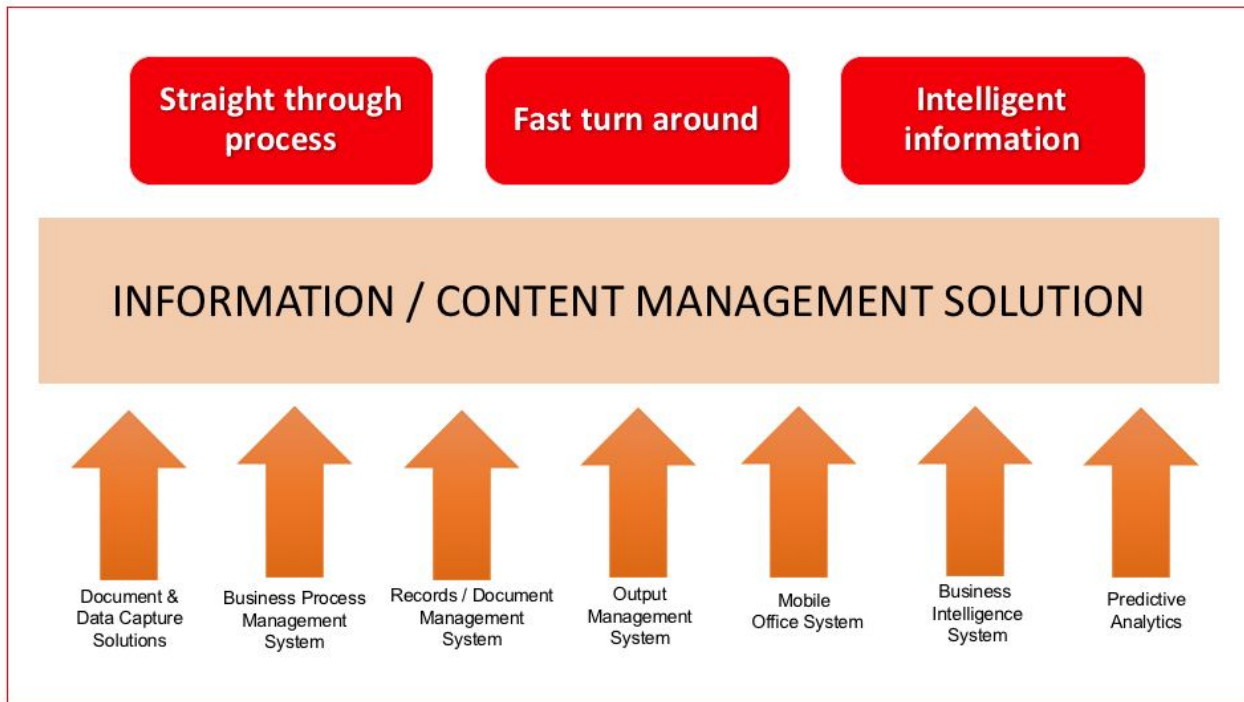

### **Data Quality Management**

- Analysis & Discovery
- Extract and Validate
- Cleansing
- Snapshot
- Update
- Reconcile
- Monitor

---

***Information /Content Management Solution***

---

**Solving Needs**

- Paper Intensive
- Data Intensive
- Customer Centric
- Fraud Detection
- Redefine Customer Experience
- Regulation Intensive
- Reporting Requirements
- Complex Processes
- Time to Market Needs
- Digital Transformation
