

Report Distribution Solution

Regular reports are vital for the monitoring and control of business conditions. But in many cases, the production of daily, weekly, monthly, and annual reports puts additional demands on administrators and employees. With so much business travel and work done out in the field, report accessibility and deliverability can also be an issue.

Enterprise Report Distribution Solution (RDS)

consolidates and stores all your reports and statements from the multiple back-end enterprise applications into a secure, central repository, enabling cost-effective distribution and access to these reports via a single user interface on a corporate report portal.

Features of the RDS

Design

- Easy to use web interface.
- Improved navigation capabilities, online viewing on various devices.
- Reports organized by reporting cycles (daily, weekly, monthly and yearly) and easily searchable.
- Able to handle splitting of large files of more than 100GB.

Efficiency & Transparency

- Single Sign-On - portal provides single point of access to reports and statements from many back-end systems.
- Retrieval via multiple formats - PDF File or Text file or CSV file.
- Multichannel distribution via report portal and email.
- Email notification to notify readiness of report processing and to allow monitoring of errors.

Security

- AES 256-bit encryption provides secure access while preventing unauthorized viewing and printing of reports.
- Ability to assign access rights based on user groups.
- Audit log feature ensures all access to stored reports are logged and traceable.

Benefits

Enjoy Significant Cost Savings

Promoting a "Greener approach", paperless office while saving on printing, delivery, license and storage costs.

Improved mobility & availability

A Single Sign-On allows convenient access that can be viewed anywhere and anytime on mobile devices via a single portal

Enhanced Security

Reports are stored with encryption and enhanced data privacy. Supports on-demand printing with watermark.

Large File Handling

RDS allows page streaming, file splitting or output of selected pages in PDF with applied password.

Overcome Weaknesses of Windows File Server

Supports content search, provides audit / activities log, allows version control.

Maintains Compliance

Audit trail is available for ease of tracking of user activity making it cost-saving to keep long history of reports in RDS for compliance purposes.

Report Generation

Backend Report Data Sources

(Core Banking / Insurance / ERP / HRMS / Legal / Risk Finance / Treasury / Loan / Card / CRM)
